Abstract Overview

- BatchLive is a hyperlocal food marketplace mobile app built with Flutter & Dart
- Connects local home-based food sellers with nearby buyers in real time
- Focus: live homemade food batches (brownies, dosa, biryani, filter coffee, cakes, etc.)
- UI: dark theme, glassmorphism effects, smooth animations, live countdown timers

Key Takeaway

**Lightweight architecture:
Hive local database +
Provider state management**

Aim and Objectives

THE MISSION

AIM

Create a visually rich and user-friendly platform enabling local home chefs to sell homemade food batches to nearby customers in real time

KEY OBJECTIVES

- Build a hyperlocal food marketplace mobile application
- Allow sellers to upload homemade food items instantly
- Provide realtime-style order tracking
- Support Android APK and web deployment
- Provide separate functionalities for buyers and sellers
- Display live food batches dynamically on the homepage
- Implement smooth animations and premium UI design
- Maintain lightweight local data and fast performance

Literature Survey Highlights

MARKET GAP

Swiggy & Zomato focus on restaurants; few platforms dedicated to homemade food

COMMUNITY TRUST

Hyperlocal commerce increases customer trust and small business participation

ENGAGEMENT

40%

Peer-to-peer food selling platforms increase seller engagement

DEVELOPMENT

Flutter enables faster cross-platform development (Android + Web)

REVENUE GROWTH

30%

Hyperlocal platforms generate more revenue for home-based sellers vs social media-only selling

System Architecture

REFERENCE IMAGE FROM REPORT

Use Case Diagram

👤 Key Buyer functionalities

- Browse live food listings
- Search nearby food
- Place orders
- Track orders
- View seller contact

🏠 Key Seller functionalities

- Upload food batches
- Add price & quantity
- Manage live status
- View orders
- Update availability

System Specifications

Hardware

- Quad-core processor
- 3GB+ RAM
- 32GB storage
- Android 8.0+

Software

FRONTEND

Flutter / Dart

UI DESIGN

Material Design; Flutter
Animate; Glassmorphism
Widgets

STATE MANAGEMENT

Riverpod / Provider

LOCAL STORAGE

Hive Database;
SharedPreferences

DEPLOYMENT

Vercel (Web); Android APK

IDE

Android Studio; VS Code

Module Descriptions

Home Module

live food listings, animated cards, countdown timers, category filters

Seller Module

upload food batches with name, category, description, quantity, price, address, contact

Buyer Module

browse listings, view details, place orders, track progress

Order Tracking Module

multi-stage tracking

Placed > Cooking > Packed > Ready > Delivered

Profile Module

user info, buyer/seller mode toggle, manage listings & orders

Map Module

location-based discovery of nearby sellers on interactive map

Key Benefits

Hyperlocal Food Discovery

Find fresh homemade food from verified neighborhood sellers.

Instant Seller Listings

Upload food batches in seconds, immediately visible to buyers.

Real-Time Order Tracking

Multi-stage tracking from cooking to pickup.

Lightweight Architecture

Fast & efficient without complex cloud backend.

Conclusion and Future Enhancements

CONCLUSION

BatchLive successfully demonstrates a hyperlocal homemade food marketplace with visually rich UI, realtime interactions, and lightweight state management

Future Enhancements

- + Firebase realtime database integration
- + Live push notifications
- + GPS-based automatic nearby seller detection
- + Online payment gateway integration
- + AI-based personalized food recommendations
- + In-app chat between buyers and sellers
- + Real-time delivery tracking system
- + Review and rating system
- + iOS deployment
